Alta tecnología EN PACKAGING FLEXIBLE

Volpak, compañía del Grupo Coesia, es referencia mundial en el diseño, fabricación y comercialización de máquinas FFS horizontales para envases flexibles, "pouch" en el mercado de bienes de consumo. Soluciones que abarcan una amplia variedad de sectores: alimentación y bebidas, cuidado personal, cuidado del hogar, químico y farmacéutico. A través de su marca Enflex, proyecta y construye soluciones entry-level a baja y media velocidad que se caracterizan por su elevada calidad y diseño. Fuente: Volpak

Volpak posee una fuerte vocación tecnológica, experta en soluciones de envases flexibles ("pouch") muy valoradas en el sector bienes de consumo. El pouch puede ser de dos tipos: plano (flat) o stand up, ambos con una gran flexibilidad, que permite envasar productos tanto sólidos como líquidos, en diferentes tamaños y materiales, garantizando una vida útil mucho más larga. Es también un envase sostenible, pues ofrece ventajas reales en: *footprint* de línea, alta eficiencia de producción (el costo de energía para producir el envase es de los más bajos del mercado), reducción de costos logísticos, así como un menor volumen de residuo. La forma del envase proporciona una gran visibilidad para incluir mensajes de promoción, un notable beneficio para las estrategias de marketing. Se pueden utilizar también diferentes sistemas de cierre y satisfacer

una vasta variedad de necesidades. El pouch es utilizado en infinidad de sectores, envasando productos como: zumos, leche, aceites, alimentos sólidos (aperitivos, chocolate), productos para el hogar y cuidado personal, farmacéuticos o alimentos para mascotas. El envase flexible es muy utilizado en todo el continente americano. En Europa, China e India se está introduciendo muy rápidamente.

Una empresa, dos marcas: la historia

Fundada en 1979, Volpak forma parte del Grupo Coesia desde 1996, contando con todo el *know-how* y la fuerza actual de uno de los más grandes e importantes grupos mundiales del packaging. Volpak, junto con su marca Enflex, ofrecen al mercado una amplia gama de máquinas automáticas a baja, media o alta velocidad con gran valor tecnológico y con una extensa diversidad de envases. Volpak es la empresa pionera en la innovación y creación de envases flexibles: *Brickpouch*, envase stand up de altas prestaciones y ergonómico; *Duopouch*, envase integrado con una pajita, destinado especialmente al mercado del *beverage* y provisto de un sistema especial de apertura; *Stand Cap Pouch*, el envase volteado que se vacía completamente con el control absoluto de la dosis. El portafolio de la compañía se complementa con una amplia gama de soluciones para el embalaje secundario. Volpak puede cubrir la totalidad de las etapas de fabricación: desde la formación del envase a la formación del embalaje en cajas de cartón y listo para su exposición en los lineales de los supermercados.

PRESS REVIEW

Ventajas estratégicas y competitivas

En la industria del envasado en bolsa flexible, Volpak cuenta con un *know-how* único, fruto de una constante investigación tecnológica unido a la experiencia acumulada en más de cuarenta años de actividad. Esto conlleva una gran capacidad de operar con diferentes materiales para el envasado, así como en la capacidad de desarrollar soluciones personalizadas en función de las características del producto a envasar, ya sean sólidos o líquidos con diferentes niveles de viscosidad y densidad. El personal técnico colabora en total sinergia con el cliente, desde las fases preliminares del proyecto a través de pruebas y tests, hasta la completa instalación de las máquinas. Se presta una especial atención y apoyo al servicio posventa. Los técnicos especializados pueden intervenir en el mantenimiento u optimizar las líneas de producción en cualquier parte del mundo. Esto se realiza también de forma "virtual" gracias al dispositivo ARA (*Advanced Remote Assistance*). Actualmente, todas las máquinas fabricadas en la planta de Barcelona son equipadas con el dispositivo ARA, permitiendo la asistencia remota las 24 horas del día por personal especializado. ●

La fuerza de Volpak reside también en su equipo, 220 empleados que trabajan en su sede social de Barcelona, establecimiento de 12.000 metros cuadrados, donde se realiza el diseño, construcción y comercialización de los equipos. Volpak cuenta también con una línea de producción en Pune (India) y una red comercial a nivel mundial (más de 34 países).

Más información: www.volpak.com

núm. 227_Julio/Agosto 2016

VOLPAK ofrece una línea completa para el envase y embalaje de productos confectionery (confeitería), desde la realización del envase al embalaje en caja, y listo para su exposición en los lineales de supermercados. Envases dotados con un sistema de apertura/cierre cómodo y funcional que permite abrirlo, utilizando su contenido y cerrando el envase a su conveniencia. La línea está compuesta por tres máquinas diferentes: SP-90 (máquina envase), Pak 1312 (máquina estuchadora) y Daina 200 (máquina encajadora).

VOLPAK le brinda la posibilidad de realizar sus productos más prácticos y atractivos. Juntos crearemos su envase flexible más innovador. Co-innovación es el camino para lograrlo.

Volpak: línea completa, envase y embalaje de productos confitería

EDITOR / PAÍSES / 28 JULIO 2016

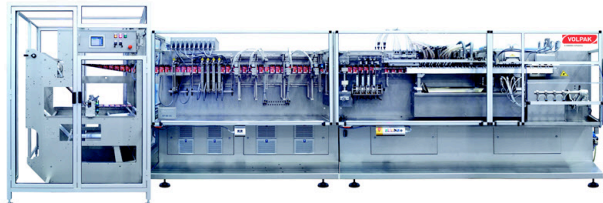

LATINOAMÉRICA PROCESOS / ENVASES

Volpak ofrece la posibilidad de hacer sus productos más prácticos y atractivos. La empresa ofrece una línea completa para el envase y embalaje de productos de **confitería** desde la realización del envase al embalaje en caja, y listo para su exposición en lineales de supermercados. Envases con un sistema de apertura/cierre cómodo y funcional que da la oportunidad de abrirlo, utilizando su contenido y cerrando el paquete a su conveniencia.

Share Me gusta Comparte Twitter In Share 67 Comparte

La línea está compuesta por tres máquinas diferentes: **SP-90** (máquina de bolsa), **Pak 1312** (máquina estuchadora) y **Daina 200** (máquina encajadora).

Modelo SP-90: máquina de sobres envasadora, con control de peso, está desarrollada para poder ofrecer elevadas producciones, confecciona sobres planos con zipper a 280 envases por minuto.

Modelo compacto, el ajuste individualizado para la formación de cada sobre, garantiza una muy buena calidad en el acabado de sobre. El aplicador de zipper está disponible para poder trabajar con sistema press-to-close o sistema tipo Velcro®.

Control de peso directo, compacto, diseñado para optimizar considerablemente el espacio de la línea. Una vez los sobres han sido sellados, el transfer de la máquina los deposita directamente en una controladora de peso estática. Otro sistema pick&place extrae los sobres de la estación de pesaje y los posiciona directamente en el agrupador-contador o en la cinta laminadora-vibradora según corresponda.

Modelo PAK 1312 para display: estuchadoras de la gama PAK que han sido diseñadas para el estuchado de sobres. Ideal para proyectos de confitería permiten agrupar los sobres en dos filas, disponiéndolos verticalmente en un estuche display, que se deposita directamente en el lineal.

Volpak dispone de distintos sistemas de agrupación de sobres para cubrir la mayoría de necesidades del mercado. Las estuchadoras PAK trabajan con estuches regulares o irregulares, así como con varios sistemas de cerrado, alas encastradas, encoladas o una combinación de las mismas.

Modelo DAINA 200: encajadora que completa la línea. Es una encajadora automática de carga lateral adecuada para estuches. Equipo compacto que integra la formación de las cajas (tipo B1), el agrupado e introducción y el cierre ya sea por cola caliente o banda autoadhesiva.

El cliente puede adquirir una envasadora o bien la línea completa con la garantía y bajo la responsabilidad de un único fabricante.

Grandes multinacionales han ya adquirido esta línea completa.

Juntos crearemos su envase flexible más innovador. Co-innovación es el camino para lograrlo.

PRESS REVIEW

Volpak, tecnologia avanzata per l'imballaggio flessibile

Attraverso il suo marchio Enflex, la società spagnola Volpak, parte del gruppo Coesia, progetta e produce soluzioni entry-level per la bassa e media velocità, caratterizzati da alta qualità e la costruzione meticolosa.

Volpak è una società costruita su basi tecnologiche solide, specializzata in soluzioni form-fill-seal per l'industria degli imballaggi pouches. Questo tipo di imballaggi flessibili sono uno dei generi più diffusi per beni di consumo e hanno due forme: piatta o stand-up. Entrambi sono estremamente flessibili e possono essere utilizzati per confezionare solidi e liquidi, in diverse dimensioni e materiali, con garanzia di lunga conservazione nel tempo. Le pouches sono anche una

soluzione sostenibile, che offre vantaggi tangibili in termini di linea di ingombro, elevata efficienza produttiva (il costo energetico per il confezionamento in buste è uno dei più bassi del mercato), riduzione dei costi di logistica, e per l'utente finale facilità di smaltimento a causa del volume ridotto. La forma della confezione è ideale per il trasporto di messaggi promozionali, a vantaggio di strategie di marketing per le aziende clienti, offrendo anche vari sistemi di tenuta per soddisfare le più diverse esigenze. Le pouches vengono utilizzate in molti settori, per confezionare liquidi come succhi di frutta, latte e oli, ma anche solidi, come snack, cioccolatini o alimenti per animali domestici. Geograficamente, la pouch è particolarmente popolare in tutto il continente americano (nei paesi latini e in Nord America) e in Europa, ma si sta rapidamente espandendo in paesi come la Cina e l'India.

Oggi, Volpak e il suo marchio Enflex offrono al mercato una gamma di macchine automatiche che operano a bassa, media o alta velocità, in grado di formare e riempire sacchetti di varie tipologie e dimensioni. Questi tipi di imballaggi a sacchetto sono molto popolari sul mercato e comprendono la Brickpouch, un tipo di stand-up robusto che offre eccellenti caratteristiche di tenuta, e Duo-pouches, per il quale si adatta una cannuccia e un sistema di apertura speciale, progettato specificamente per le bevande. L'offerta della società è completata da una vasta gamma di soluzioni per il packaging secondario, che permette a Volpak per soddisfare le esigenze delle diverse fasi di confezionamento, dalla formazione dell'imballaggio a sacchetto al suo assemblaggio all'interno delle scatole in cartone.

VANTAGGI STRATEGICI E COMPETITIVI

Nel settore dell'imballaggio flessibile per pouches, Volpak vanta un know-how unico che proviene dalla costante ricerca tecnologica e oltre 40 anni di esperienza. Questo si traduce nella possibilità di gestire diversi materiali di imballaggio e la possibilità di personalizzare soluzioni per soddisfare il prodotto da confezionare, sia esso solido o liquido, e con diversi livelli di viscosità e densità. Il lavoro del personale tecnico è in tandem con i clienti, dalla fase preliminare di progettazione delle macchine fino alla successiva installazione di attrezzature. Il post-vendita è considerato particolarmente importante e gli ingegneri della società si recano nei siti di tutto il mondo per la manutenzione e l'ottimizzazione delle linee di produzione. C'è anche l'ARA - Advanced Remote Assistance system - aderente a tutte le più recenti generazioni di macchine prodotte a Barcellona, con personale qualificato e supporto "virtuale" 24 ore su 7 giorni.

La forza di Volpak risiede non solo nella tecnologia, ma anche nella squadra di persone che lavorano all'interno dell'organizzazione. Oggi l'azienda può contare sulla competenza di 220 addetti, con base principale nella sede di Barcellona, un impianto di 12.000 metri quadrati in cui i prodotti sono progettati, prodotti e commercializzati. La società ha anche un secondo sito di produzione a Pune, in India, e una rete di vendita che copre il mondo, presente in oltre 34 paesi. Lo stretto rapporto con il CEC - Coesia Engineering Center - permette di condividere packaging innovativi e soluzioni industriali sviluppati dal gruppo e dalle sue 15 aziende, ampliando il know-how tecnologico a disposizione dei clienti che cercano soluzioni ottimali da Volpak / Enflex per trattenere la leadership nei settori di riferimento.

VOLPAK, a company of Coesia, will take part at Pack Expo Exhibition, in Chicago, from November 6th to November 9th, presenting the latest advancement in pouching technology. The company, will organize a series of brief seminars focused on the solutions available for pouching as well as the many advantages of using pouches: a kind of packaging more and more used in everyday life.

From breakfast to dinner: when convenience meets attractiveness. Products packed in pouches are so many and diverse that is actually difficult to understand how much they are (and are destined to become) more and more part of everyday life. At Pack Expo, VOLPAK is aiming to show the reasons why flexible pouches are becoming increasingly ubiquitous in our homes, turning into inseparable companions in our daily activities. But that's just the beginning. In fact, VOLPAK can boast a unique know how in the flexible packaging field, with a specific experience in pouching technologies. No machines from VOLPAK will be actually on show in Chicago, but its staff will be at visitors' and clients' disposal, to show them the different solutions suitable to be used according to different packaging needs: from liquid to solid products, covering all the consumer goods sector.

New solutions for innovative markets

The company is investing strongly to keep its technological at the state of the art. In fact, new machines and solutions are being developed, ready to hit the market in 2017, such as the SI-440, which will further expand the successful SI series. The new machine is the result of the company's intense R&D work and incorporates multiple innovations willing to be one of the most flexible and versatile horizontal machines in the packaging market today. The SI-440 will perfectly adapts to every need: from projects requiring large production of small and medium-sized formats (from ¼ litre with production up to 200/spm), to projects that require large format packaging (up to 2 litres, liquid or solid products). Among the multiple applications for which the new SI-440 model can be used, the cereal market is especially noteworthy, since it is probably the greatest exponent of innovation and modernisation in the packaging market. The zip-close stand-up packaging is the one that best adapts to market tendencies, since it perfectly meets the expectations of both manufacturer and consumer.

The new machine is the result of the company's intense R&D work and incorporates multiple innovations willing to be one of the most flexible and versatile horizontal machines in the packaging market today.

VOLPAK: Facts and figures

VOLPAK, part of Coesia, is a company built on sturdy technological foundations, specializing in form-fill-seal solutions for the pouch-type packaging industry.

Founded in 1979, Volpak merged with the Coesia group in 1996, subsequently benefiting from its expertise and the solidity of what is now one of the biggest and most important packaging groups in the world.

In 2001 VOLPAK acquired ENFLEX, a company specializing in the design and sale of medium-speed horizontal flexible packaging machines, further expanding its portfolio of solutions.

Today, VOLPAK and its ENFLEX brand offer the market a range of automatic machines operating at low, medium or high speed, able to form and fill pouches of various types and sizes. The company can count on the expertise of 220 staff, based mainly in the

Barcelona headquarters, a plant of 12,000 square metres where products are designed, manufactured and marketed. The company also has a second production site in Pune, India, and a sales network covering the globe, present in over 34 countries.

NEXT ARTICLE
[Nestlé innova en una nueva categoría](#)

Volpak en su afán de innovación y respuesta al continuo crecimiento del packaging flexible, apuesta de forma decidida por ampliar la exitosa gama de máquinas de la Serie SI, con el desarrollo del nuevo modelo SI-440. La nueva máquina horizontal SI-440 es fruto del intenso trabajo de I+D de la compañía e incorpora múltiples innovaciones en relación a los modelos ya existentes de esta serie, dando como resultado final una de las máquinas horizontales más versátil y flexible del mercado del packaging.

[f Share](#) [f Me gusta](#) [Compa](#) [v Twitte](#) [in Share](#) 321 [G+ Comparti](#)

La nueva SI-440 se adapta perfectamente a todo tipo de necesidades: desde proyectos en los que sea necesaria una gran producción de formatos pequeños y medios (a partir de ¼ litro con producción de hasta 200/spm); hasta proyectos donde se precisen envases de gran formato (hasta 2 litros, con productos líquidos o sólidos).

- Entre las principales mejoras que incorpora la nueva SI-440 destacan las siguientes:
- Máxima fiabilidad y estabilidad en la formación del envase, incluyendo un nuevo sistema de llenado y cerrado de los sobres, apto para todo tipo de productos, materiales de envase, formatos y diseños diversos.
- Nuevo sistema de cambio de formato, más simple, atractivo y rápido para optimizar la experiencia del usuario de la máquina, logrando minimizar pérdidas de tiempo y de material.
- Regulación de la apertura y estirado de los sobres completamente automática.
- Posibilidad de controlar la temperatura y la presión de sellado, ajustando el tiempo necesario de sellado y optimizando los 3 parámetros de presión/temperatura/tiempo en función del tipo de material y envase a producir, maximizando así el rendimiento de la máquina y la calidad del producto acabado aun en las condiciones más adversas de trabajo.

Entre las múltiples aplicaciones a que se dirige el nuevo modelo SI-440, destaca especialmente el mercado de los cereales, probablemente el máximo exponente de la innovación y la modernización en el mercado del packaging, a la búsqueda de envases que vayan más allá del tradicional "Bag in box". El envase stand-up con cierre zipper es el que mejor se adapta a las tendencias de mercado y cumple perfectamente las expectativas del fabricante y las necesidades del consumidor.

El nuevo modelo SI-440 es la máquina ideal tanto por el tamaño de sobres que puede realizar, como por la inmejorable calidad de envase final, permitiendo una óptima presentación en el punto de venta.

PRESS REVIEW

Nuovo arrivo nella serie SI di Volpak

LA NUOVA SI-440 BY VOLPAK

PER FORMARE E RIEMPIERE
BUSTE STAND UP CON ZIP-CLOSE

VOLPAK è costantemente impegnata in un processo di aggiornamento e sviluppo tecnologico, in risposta alle continue evoluzioni nel settore del packaging flessibile. Da qui la scelta di ampliare la famiglia di macchine "SI" con il nuovo modello SI-440, che verrà lanciato nel corso del 2017.

Piccoli o grandi produzioni, per prodotti liquidi o solidi

La nuova macchina a **sviluppo orizzontale SI-440** è il risultato dell'impegno del reparto R&D dell'azienda e incorpora molteplici innovazioni già presenti sulla serie SI.

SI-440 si prefigura come una delle macchine più flessibili e versatili oggi disponibili, in grado di adattarsi ad ogni esigenza: **produzioni su larga e/o piccola scala, lotti di prodotti di piccolo e medio formato (da ¼ di litro fino a 200/spm) fino a quelli di grande capienza (fino a 2 litri, sia liquidi che solidi).**

Le caratteristiche tecnologiche

La nuova SI-440 garantisce massima flessibilità ed efficienza nelle fasi di formatura del packaging e include un nuovo sistema **per il riempimento e la chiusura del pouch**, adeguato all'utilizzo con tutti i principali materiali d'incarto, caratterizzati da formati e design differenti.

La macchina è equipaggiata con un nuovo **sistema di cambio formato, più semplice, veloce e facile da utilizzare**, in modo da ottimizzare i tempi - sensibilmente ridotti - e impiegare la minor quantità di materiale possibile. Con fasi di apertura e svolgimento del sacchetto completamente automatizzate, la macchina offre la possibilità di controllare la temperatura, il tempo e la pressione di saldatura, intervenendo su questi parametri a seconda del tipo di materiale e di packaging da produrre, il che consente di massimizzare le performance della macchina e la qualità del prodotto finito.

Mercati e applicazioni

Molti i settori applicativi cui è destinata la SI-440, tra cui, in particolare, il mercato dei cereali (fortemente orientato all'innovazione e alla ricerca di soluzioni che vadano al di là del tradizionale "bag in box").

Il packaging stand up con chiusura "zip-close" realizzato dalla nuova macchina **VOLPAK** si adatta perfettamente alle tendenze di mercato, rispondendo alle richieste di produttori e consumatori.

SI-440 è quindi la soluzione ideale, sia in termini di flessibilità delle dimensioni dei packaging da realizzare che di qualità finale del prodotto, consentendone una presentazione ottimale a scaffale.

PRESS REVIEW

New development in the SI Series by Volpak

THE NEW SI-440 BY VOLPAK

TO FORM AND FILL
ZIP-CLOSE STAND-UP PACKAGING

VOLPAK strives to innovate and respond to the continuous growth in flexible packaging and, to this end, is committed to expand the successful range of SI Series machines by developing the new SI-440 model, which will be officially presented during 2017.

Small or large production runs, for liquid and solid products

The new **SI-440 horizontal machine** is the result of the company's intense R&D work and incorporates multiple innovations in relation to the existing models of this series.

This new machine is one of the most flexible and versatile horizontal machines in the packaging market today. The new SI-440 adapts perfectly to every need: from projects requiring **large production of small and medium-sized formats (from ¼ litre with production up to 200/spm), to projects that require large format packaging (up to 2 litres, liquid or solid products).**

SI-440: technical features

The new SI-440 guarantees maximum reliability and stability when forming the packaging, including a new filling and sachet-closing system, suitable for all types of products, packaging materials and various designs and formats.

The machine is also equipped with a new format-change system, simpler, more attractive and faster, in order to optimise the machine user experience and to achieve minimal waste of materials and time. SI-440 features the fully-automatic adjustment of the opening and stretching of the sachets.

Finally, the machine offers the possibility to **control the sealing temperature and pressure**, adjusting the necessary sealing time and optimising the 3 parameters of pressure/temperature/time with respect to the type of material and packaging to be produced. This allows us to maximise the machine's performance and the quality of the finished product, even in the most adverse working conditions.

Markets and applications

Among the multiple applications for which the new SI-440 model can be used, the cereal market is especially noteworthy, since it is probably the greatest exponent of innovation and modernisation in the packaging market, and the search for packaging that goes beyond the traditional 'Bag in box'.

The **zip-close stand-up packaging** is the one that best adapts to market tendencies, since it perfectly meets the expectations of both manufacturer and consumer.

The **VOLPAK** new SI-440 model is the ideal machine, both for its sachet sizes and for the unbeatable quality of the final packaging, allowing optimal presentation at the point of sale.

A complete line handling pouches in shelf ready display cases is now available for many confectionery products

Volpak UK agent Engelmann & Buckham offers a complete line for ready to display, pouch to case packaging for confectionery products. This line is composed of three different machines: the SP-90 (pouching machine); Pak 1312 (cartoner) and also Daina 200 (case packer).

“Customers can purchase a single packaging machine or acquire the complete production line which would put the guarantee and responsibility under a single

Pouches for confectionery

manufacturer,” explains Michael Lindsay, director at Engelmann & Buckham. “A number of large companies have already acquired this complete line.

The compact pouch machine is the SP-90 with weight control, a model which has been developed to produce flat pouches with zipper, and is capable of achieving speeds up to 280 packs a minute.

Introducing the new VOLPAK website: a flexible and dynamic tool

Date 12.19.2016 | Category: News

Vote: ★★★★★

VOLPAK, a Coesia company, has launched its renewed website, designed for easy and accessible navigation for the customers as well as other users. The new website has been studied and structured according to Web 2.0. and provides a very clear and complete information respective Volpak's fields of competence and packaging solutions offered.

Full range of pouch solutions for different customers

One key part of the new website is the "Industry" section: here you can get an understanding of the wide range of sectors covered by its technologies. VOLPAK designs and manufactures automatic flexible packaging machines for consumer goods manufacturers. From the Beverage, Food, Pet Food, Home Care to Personal Care sectors, VOLPAK's solutions are suitable to cover all the different flexible packaging needs, the right solution for each specific product and customer requirement.

State of the art technologies

Here you can find information about the different solutions provided by VOLPAK: from the horizontal form-fill-seal pouching machines to machines for the secondary packaging of pouches. Another of Volpak's feature is, in fact, the ability to provide complete lines, for pouch to case, ready for shipping or display with a wide range of pouches, shapes and formats.

Innovating: both on and off line

The Innovation section explains the role VOLPAK plays not just as a supplier of technologies but as a true partner in studying new solutions by working hand-in-hand with customers and partners in the packaging industry. As a result, new packaging, new machines, new dosing systems and new applications are all developed to provide value to our customers. www.volpak.com

VOLPAK, a Coesia company, has recently published its renewed website, designed for easy and accessible navigation for the customers as well as other users. The new website has been studied and structured according to Web 2.0, and provides a very clear and complete information respective Volpak's fields of competence and packaging solutions offered

Full range of pouch solutions for different customers

One key part of the new website is the "Industry" section: here you can get an understanding of the wide range of sectors covered by its technologies. VOLPAK designs and manufactures automatic flexible packaging machines for consumer goods manufacturers. From the Beverage, Food, Pet Food, Home Care to Personal Care sectors, VOLPAK's solutions are suitable to cover all the different flexible packaging needs, the right solution for each specific product and customer requirement.

State of the art technologies

This is possible thanks to the company's many years experience and acquired know-how, which is summarized under the "Technologies" section. Here you can find information about the different solutions provided by VOLPAK: from the horizontal form-fill-seal pouching machines to machines for the secondary packaging of pouches. Another of Volpak's feature is, in fact, the ability to provide complete lines, for pouch to case, ready for shipping or display with a wide range of pouches, shapes and formats.

Innovating: both on and off line

VOLPAK is well known as an innovation-focused company, with a proven track record in managing complex projects. The Innovation section explains the role VOLPAK plays not just as a supplier of technologies but as a true partner in studying new solutions by working hand-in-hand with customers and partners in the packaging industry. As a result, new packaging, new machines, new dosing systems and new applications are all developed to provide value to our customers.

Updated news from VOLPAK's world

The new website is part of a multi-point communication strategy, which also includes frequent posts on LinkedIn, VOLPAK's main social media platform, as well as the publication of the company's news under the dedicated section of the website. Under the same section you will also find a collection of the articles dedicated to VOLPAK, published on the most representative media publications worldwide, as well as an updated calendar showing all the upcoming and scheduled exhibitions.
